

MINI-LIGHTS OVER 50 LUMENS

Lezyne KTV Drive 200 £28

The Lezyne KTV Drive is a scaled-down version of Lezyne's larger lights. However, it's a step up in size and power from the inline blinky-type lights. It also weighs a bit more at 50g, but it doesn't need a separate mount since its own can swivel, meaning it can be attached to the underside of a tri-bar extension, and this is the best position for it.

The only issue with the tri-bar position is that the extension needs to be horizontal in order for the KTV Drive to be pointing directly ahead rather than upwards, since it's not adjustable in the vertical plane.

For charging, you pull the rubber cap off the rear to reveal a USB connector that plugs directly into a USB port. The cap is close fitting and secure and Lezyne is confident enough in it that it claims IPX7 waterproofing (can be

submerged in 1m of water for 30 minutes).

All five modes, even 'flash 2', which has a 20-hour run time, emit a lot of light. The daytime flash (6h 30min run time) is incredibly bright.

The edge of the lens on the underside (it would be upside-down attached to an extension) is not shrouded by the casing but the light that escapes is not dazzling, plus if you're mounting it under a tri-bar extension it would be mostly hidden.

Is it aerodynamic? As ever it's hard to say, and it would be pretty difficult to get consistent real world data on it,

Weight
50g

but it's almost a teardrop shape and shouldn't be any less aerodynamic than the blinky type, especially as it doesn't require a separate mount.
