

### **Reynolds 58 Aero**

**£2,100 | \$2,775**

The Aero range is a new family of clincher wheels from Reynolds. There are three depths - 58, 72, 90mm - which can be bought as equal or staggered should you prefer a less deep front wheel that's more manageable in windy conditions. The key feature of the Aero range is DET (Dispersive Effect Termination), the sharp trailing edge design of the rim which was developed for the RZR model. DET smooths the airflow coming off the leading half of the wheel, reducing drag and improving handling in crosswinds. This set weighs 1,605g (claimed 1,580g). Look out for a full test soon.
