LEZYNE MINI DRIVE 300 / KTV PRO

► **WHAT THEY SAY:** Mini Drive 300 KTV Pro is a compact, multi-purpose performance LED cycling light set.

► **WHAT WE SAY:** Plugging these directly into a USB port might prove tricky given their size, but no one needs another cable in their life. Besides, as it turned out, recharging proved easy. Powerful on constant beam at 300 and 20 lumens respectively, you'll get an hour out of the front and three from the rear on those settings. Another seven front options and four rear ones, though, means longer burn times are available. The illuminated front power switch doubles up as a charge indicator, while the rear light's body angles the light down and is profiled to work with several seatpost shapes.

VERDICT
Powerful enough to see by and to get you seen, too. Lezyne has hit the jackpot at this price.
