

**WE SAY...**  
*The Giustaforza oozes quality and is the ideal tool for tightening bolts on expensive carbon components*

**04 LEZYNE TORQUE DRIVE £51**

★★★★★

**INCLUDED BITS** 2, 2.5, 3, 4, 5, 6mm HEX; T10, 25, 35 TORX; FLAT, PHILLIPS DRIVERS **RANGE** 2-10Nm **DRIVE SIZE** 1/4in

Lezyne's minimalist 2-10Nm wrench comes with six hex and three Torx bits and a couple of screwdriver heads, and its finish quality is up to Lezyne's usual high standards. The design uses an internal precision-machined torsion bar, with the torque shown by indices printed on the shaft and a pointer on the head. It proved very accurate in use throughout its narrowish 2-10Nm range, but the design does make it a clockwise-only tool. Its quality, accuracy, compact 160mm long case and 145mm length make this a great travel torque wrench, but there are better options for heavy-duty workshop use.

**05 SYNCROS TORQUE WRENCH 2.0 £69.99**

★★★★★

**INCLUDED BITS** 75mm EXTENSION; 3, 4, 5, 6, 8, 10mm HEX; T20, 25, 30 TORX **RANGE** 2-24Nm **DRIVE SIZE** 1/4in

Syncros's wide-range torque wrench looks like a high-quality item with its polished chrome-vanadium head and shaft securely fixed into an anodised handle. The sprung collar is a cinch to adjust and set, and its compact 1/4in drive head makes it easy to get into tight spaces, the supplied 75mm extension bar helping further. It comes with six hex and three Torx bits, its 22cm length is a good size for making precise adjustments and it works both clockwise and anti-clockwise. The Syncros is the best value tool here and if you take care of it, this should serve you well for years.

**06 EFFETTO MARIPOSA GIUSTAFORZA 1-8 DELUXE £130**

★★★★★

**INCLUDED BITS** 100mm EXTENSION; 4mm, 5mm, T25 EXTENSIONS; 2, 2.5, 3, 6 HEX; T10, 15, 20, 30 TORX; FLAT, PHILLIPS DRIVERS **RANGE** 1-8Nm **DRIVE SIZE** 1/4in

The handmade-in-Italy Giustaforza oozes quality and has the most defined click here when you hit your desired torque. It's compact and its minimal head makes this the easiest tool to use in tight spaces. Its numerous bits, drivers and extensions all come in a neat Velcro-secured bundle. It has a 1-8Nm range, comes with a comprehensive - 5000-cycle - guarantee and you can send it back to be serviced and recalibrated. This is the tool I reach for when tightening small, potentially expensive parts such as carbon bars and stems. There's simply nothing of better quality around.
