"Durability is crucial, and that swings the win DMR's way for the third year running"

★★★★★

DMR AXE

£140 (crank arms only)
Outstandingly stiff and strong

When it comes to strength, stiffness and value, few can trump DMR's AXE cranks, which is why they've done so well in our grouptests since their inception. They're not too hard on the scales either, at 643g (crank arms and 30t direct-mount ring). The 'Hollowform' technology used to create the arms coupled with the 30mm-diameter axle ensure efficient power transfer when you get on the gas. You can get the arms in 165, 170 and 175mm lengths, and they'll work with just about every bottom bracket out there.
